

Types of Missing Values

Types of Missing Values

- **MCAR - *Missing Completely At Random***
- The types of missing values are the values which are missing without any reason or pattern.
- The values are missed randomly across the dataset and have no association with any other factor.

Types of Missing Values

MAR - *Missing At Random*

- The missing values in this category have some association with other features of the dataset.
- The variable which has missing values can be linearly related to any other variable of the dataset.

Types of Missing Values

MNAR - *Missing Not At Random*

- These types of missing values are the values which are missing with some specific reasons.
- And we will have a clear understanding and logic for the missing value.
